PROFILE

Looking for a challenging role so that I can use my skills and capabilities through sincere dedication and hard work for successful career.

PROJECT

Shop Management System(C++)

- A Shop Management System is a software application designed to streamline and automate various processes involved in managing a retail or wholesale business. This type of system helps store owners or managers in organizing their inventory, sales, customer information, and User Authentication and Access Control .

Employee Information Management System(VB.NET)

- An Employee Information Management System (EIMS) is a comprehensive software solution designed to centralize and organize various aspects of employee-related data within an organization. The system aims to enhance efficiency, and provide a unified platform for managing and accessing critical employee information.

Mykart(PHP, HTML, CSS)

- The PHP E-Commerce Website project aims to create a robust online platform for buying and selling products. It provides a seamless shopping experience for users and efficient management tools for administrators.

File Arrangement(JAVA)

- The File Extension Sorter is a Java application designed to organize files within a specified directory based on their file extensions. It provides a convenient way to sort and categorize files, making it easier to manage large collections of files.
